Teksud is an engineering company specialized in the development, construction, and management of renewable energy plants throughout the country.

Teksud was born in 2015 from the passion and professionalism of two architects, Giovanni Dibenedetto and Rosa Maria Di Santo.

The two co-founders have chosen to apply their skills to the field of renewable energy. It is an expanding key sector for the sustainable and responsible development of it.

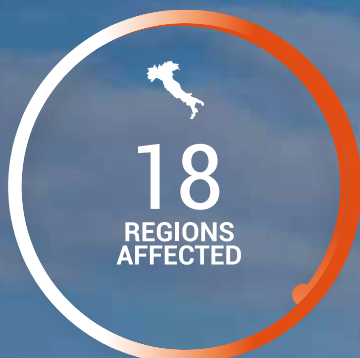

**Their project and their vision were soon shared by other 'dreamers' who decided to join in the growth of the company.**

**Teksud is made up of a young, close-knit, and dynamic team, always in step with the innovations of the sector, which is rapidly expanding and projected towards the future.**

Because of the expansion and changeability of the sector, Teksud offers consultancy and assistance services, ensuring the customer competent and constant technical support from industry experts,

prepared to promptly guarantee the best solution to the customer's needs.

## **PROFESSIONALITY RELIABILITY AND COMPETENCE**

**MISSION** - Teksud presents itself as a single interlocutor, a guarantee of competence, safety and quality in the provision of engineering services in the field of Green Energy.

Teksud is the ideal partner for all potential stakeholders in the renewable energy sector.

**VISION** - Teksud's Vision is to help make the planet powered by clean, distributed and shared energy, thanks to the development and growth of renewables.

# Services

The company carries out the technical design activities, taking care of the authorization and regulatory requirements of all the bodies involved, also managing aspects relating to the construction site, safety and operation of the renewable energy plants, even providing technical support to the Customers during the management phase of the systems produced.

## Development

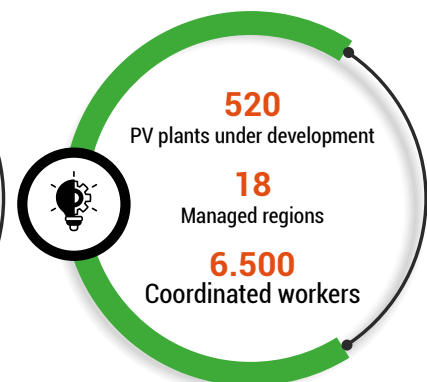

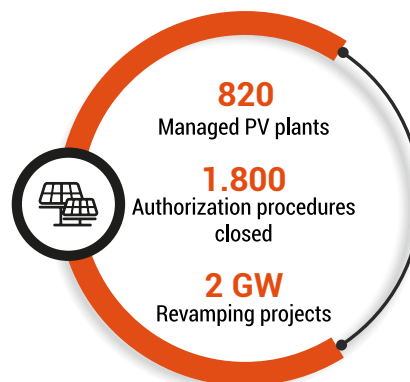

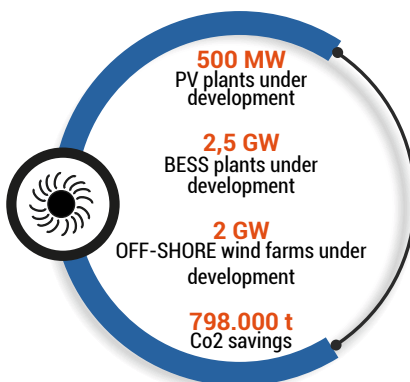

We carry out feasibility analysis for the origination of new initiatives for greenfield or brownfield projects. In the next phase we develop the practicability analysis and the permitting follow-up activity, with particular attention to relations with the various stakeholders, public bodies, and landowners.

## Engineering

We prepare the technical documentation for the design, definitive and executive phases, both for the purposes of the construction and operation of new PV plants with the related necessary infrastructures, and for the revamping and repowering activities of existing systems.

## Operation

Organize and manage all the operational phases of the interventions to be carried out, from the start of the construction site to the final testing.

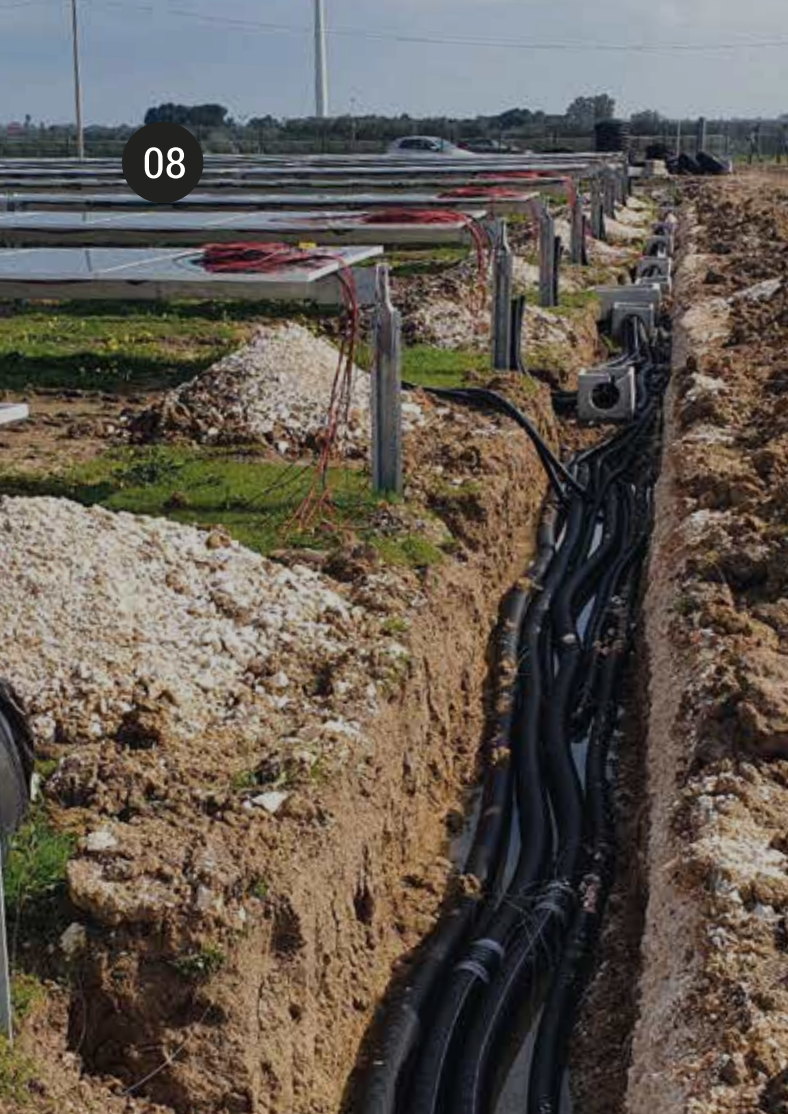

# Passion and dedication, the key to achieving results

## Choose us because...

Our professionalism ensures  
the most appropriate answers  
and solutions to the  
customer's problems.
